Presenting...St. Cloud Orthopedic *Precast as a healthcare solution*

St. Cloud, MN - November 1, 2010 - St. Cloud Orthopedics recently hosted an open house for the public and local businesses as they officially began conducting business in their new space. Wells Concrete was proud to provide the precast concrete product for this project in collaboration with Winkleman Construction of St. Cloud, Minnesota.

St. Cloud Orthopedic entrance

Winkleman brought Wells Concrete to the table early in the design phase based on a solid working relationship with other clients.

Precast as a building solution for healthcare environments is fitting for many reasons. The physician group involved in financing and building this space saw the importance of longevity and durability but held equal interest in the established budget.

The Wells Concrete team helped the design and construction team best leverage the right mix of concrete products to meet their goals.

Since 1951, Wells Concrete has been building and installing reliable, competitively superior concrete products that are leading-edge in quality, cost and customer satisfaction through the integration of experienced people, production technology and industry standards. Architects, building owners, developers and contractors throughout the Upper Midwest rely on Wells Concrete to provide architectural and structural precast/prestressed concrete products.
